

Stadium stands waterproofing based on the HYPERDESMO® System

Stadiums are stunning structures that are subject to many different loads, mechanical stresses and heavy pedestrian traffic. They require advanced waterproofing solutions for the exposed stand areas to avoid damages to the concrete and its structural integrity. Moreover, the sealing of construction joints is extremely important in order to accommodate the structure's movement.

1 PRIMING

MICROSEALER-50 / AQUASMA™-DUR

2 SEALING

HYPERSEAL®-EXPERT-150

3 WATERPROOFING (1ST coat)

HYPERDESMO® System

4 WATERPROOFING (2nd coat)

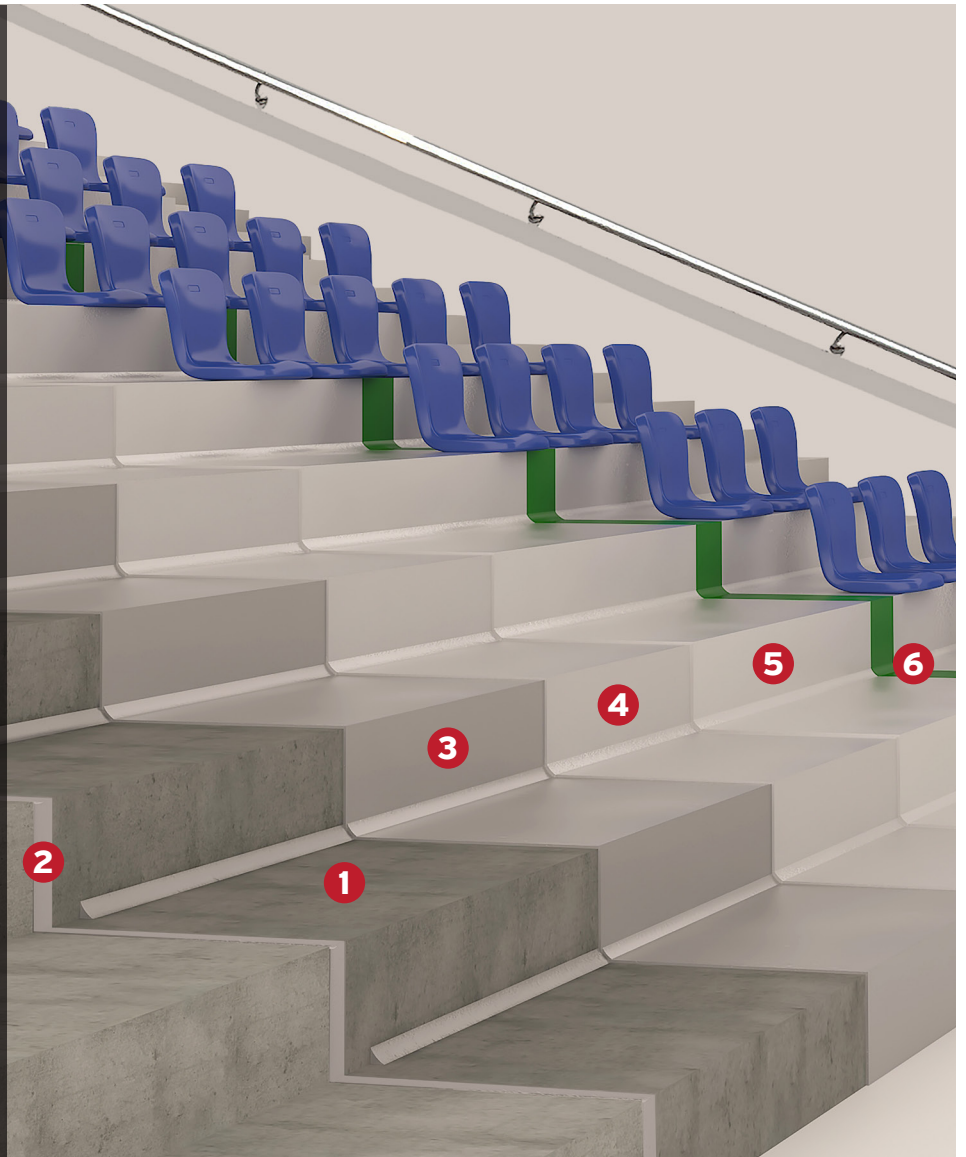

HYPERDESMO® System

5 TOP COAT APPLICATION

HYPERDESMO®-ADY-E

6 TRAFFIC LINE MARKING

AQUASMA™ -TC 2K Floor Protect

ALCHIMICA offers waterproofing, sealing and concrete protection solutions for hard traffic requirements, based on the HYPERDESMO® System liquid applied waterproofing membranes which are highly suitable for stadium stands, increasing their durability and offering waterproofing protection.
